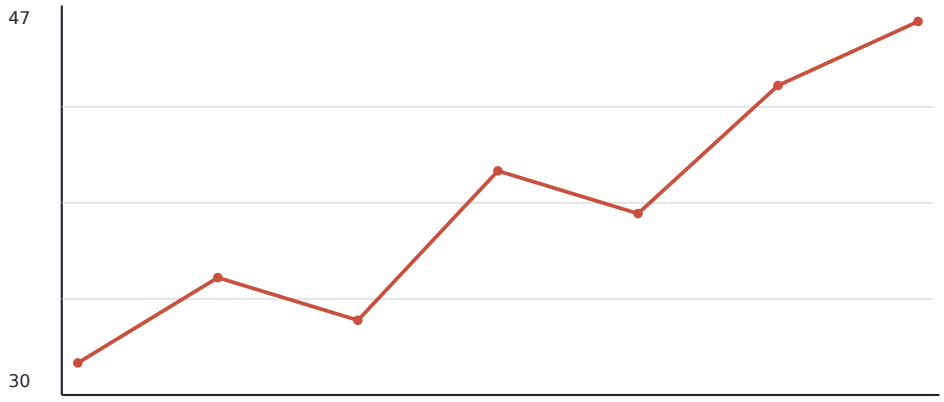
1 Operations summary

Table 2 shows the totals for each depot in the spring. The numbers are drawn from the weekly logs kept by each shift lead. They have not yet been audited by the finance team.



Volumes climbed steadily through the first half of the year. A short dip in March matched the planned maintenance window. By June the network was moving more freight than ever before.

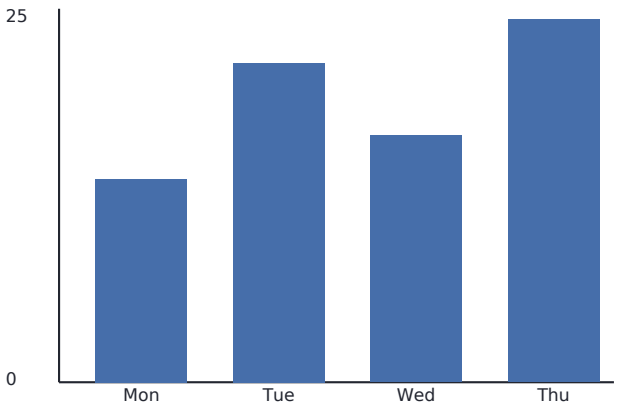


Exhibit 3: Weekly deliveries by depot.

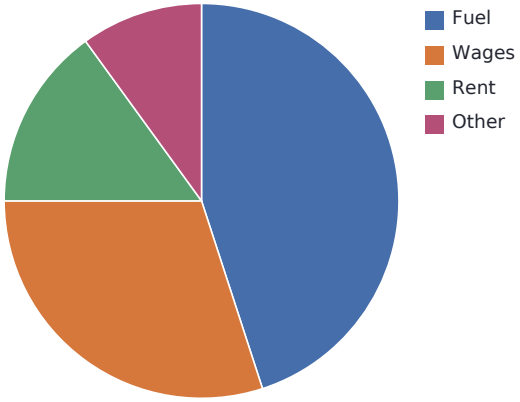
TABLE IV
Depot capacity and staff.

Depot	Bays	Staff
North	12	40
Quay	8	26
Inland	10	31

Chart 1 of the plan lists every new route for the autumn. Each route was scored for cost, distance and expected demand. The three best routes start in October.

Cost per crate is now the main measure the board watches. Fuel and wages make up most of that cost. Rent is fixed until the leases end.



The split between fuel and wages has barely moved in two years. Small gains came from better routing rather than cheaper fuel.

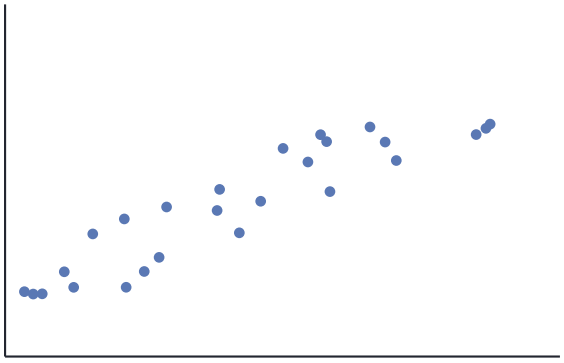


Fig. S2. Sensor drift over the trial.

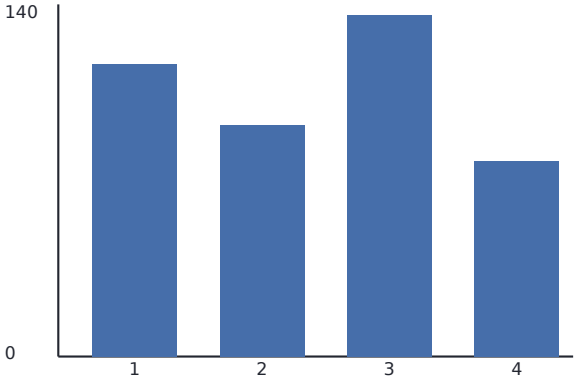

Fig. 3. Response time per request type.

Exhibit 4: Staffing by shift.

Shift	Drivers	Loaders
Early	14	22
Day	18	30
Late	11	16

Table 1: Fuel use per route.

Route	Litres	Km
R1	310	820
R2	275	760
R3	198	540

Figure skating is popular in the northern towns. Several drivers coach local clubs at the weekend.
