Sensor trial results

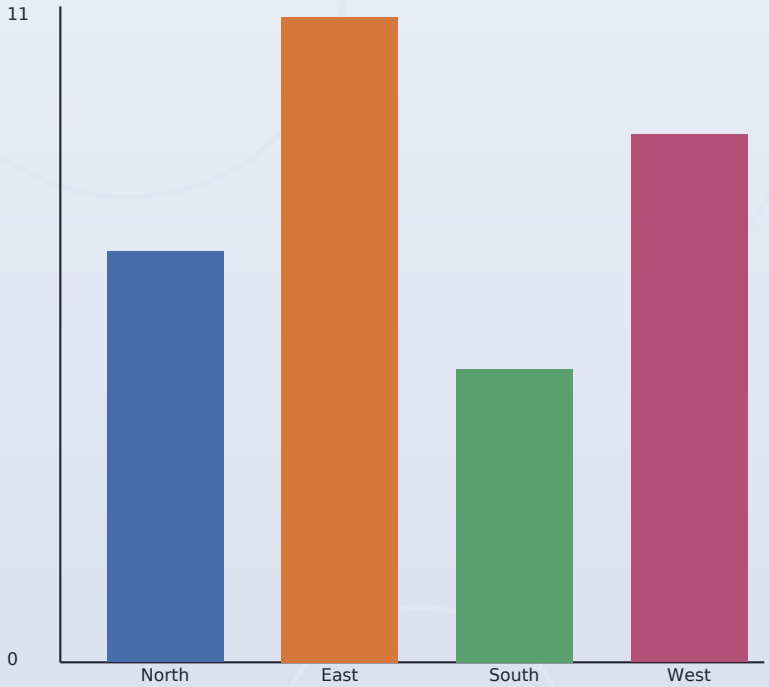

SENSA

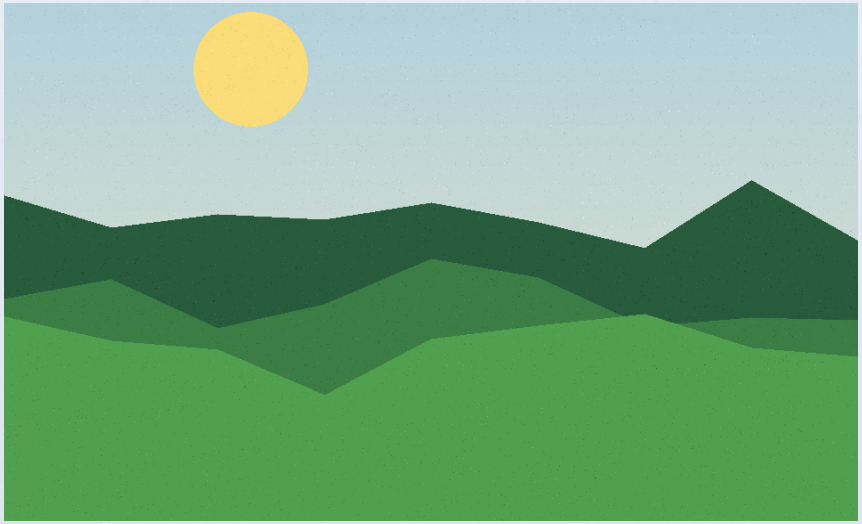

Sensor	Mean	Drift
A1	20.4	0.3
A2	19.8	0.5
B1	21.1	0.2
B2	20.9	0.4

The trial ran for six weeks at three sites. Each sensor was checked twice a day against a reference probe. Readings outside the expected band were flagged for review. Most flags came from the two sensors near the loading bay.

Shipments by region

The east region shipped the most crates. The south region lost two weeks to flooding.
